1. How Do I Start? 3
2. How to Follow Our Signals Step by Step 4
3. How to Manage Take-Profits 7
4. What is Leverage? 7
5. Final Recommendations 8

The main objective of this PDF is **helping you maximize your profits by learning how to start from scratch, manage take profits, risk, leverage, and other key factors**. It is not our intention to explain deeply what the cryptocurrencies are, which factors affect changes in their prices, or any other aspect that is not 100% relevant when it comes to successfully following our signals. We will, however, start with a short introduction for you to follow everything we explain.

1. HOW DO I START?

STEP 1: DOWNLOAD THE FOLLOWING APPS

- Telegram (Available in App Store and Play Store)
- Bybit or Bitget (Available in App Store and Play Store)

Why BYBIT?

BYBIT Is the best platform to follow our crypto signals because of its low commissions. Wolfx Members will have special conditions after signing up with Bybit.

Sign up in BYBIT using this link: https://partner.bybit.com/b/wolfxsignals, deposit $100 or more and you will receive **$20 for FREE + 100% fee discount in SPOT**.

Why BITGET?

BITGET is our second recommendation, and the best thing is that it's available in most of the countries, including **Canada, UK, Australia, and every European Country**.

Sign up in BITGET using this link: https://partner.bitget.com/bg/wolfxsignals, deposit $100 or more and you will receive $10 for FREE + 100% fee discount in SPOT.

STEP 1.1: DEPOSIT YOUR FUNDS IN BYBIT

You have to deposit your money and then buy USDT in "Markets", since we are going to do all the operations with this pair. Finally, you must transfer the USDT from your Spot Account to the Derivatives Account, which is where we will operate.

Here you have a full guidance explaining how to deposit in Bybit:
https://www.bybit.com/en-us/help-center/bybithc_article?language=en_us&id=000001119

STEP 1.2: DEPOSIT YOUR FUNDS IN BITGET

You have to deposit your money and then buy USDT since we are going to do all the operations with this pair. Finally, you must transfer the USDT from your SPOT to the FUTURES wallet, which is where we will operate.

Important Rules

- **RESPECT THE ENTRY ZONE.** Don't enter below the entry zone (You will learn how to enter correctly in the next pages).
- **NULL SIGNALS**: If a signal hits the SL value before reaching the entry point, the signal will be considered as NULL (0.00% profit). We always post signals at a price between the Entry Zone and the Stop Loss Point.

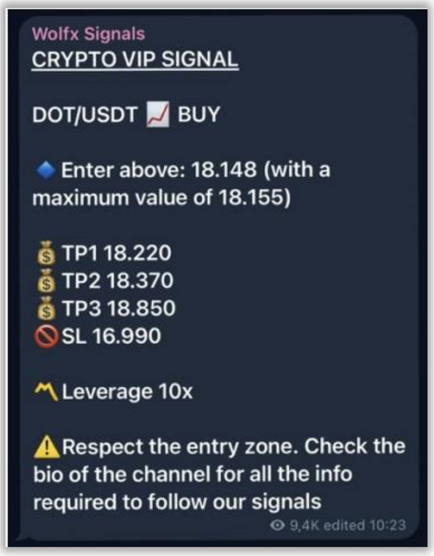
2. HOW TO FOLLOW OUR SIGNALS STEP BY STEP

Important Indications

- THESE STEPS ARE TO FOLLOW OUR SIGNALS MANUALLY.
- TO USE THE AUTO-TRADING TOOL THERE'S A PINNED MESSAGE IN THE VIP GROUP WITH ALL THE INFO.
- With the Auto Trading Tool, you don't need to do ANYTHING. It's very effective for those who are **beginners or don't have time to trade**.
- To use the Auto Trading Tool, first you need to become a Crypto VIP Member.

To Follow our signals MANUALLY the process is the following:

1. We send a signal to our telegram channel. It will look like this:



For this example, the *value 1* = 18.148 and *value 2* = 18.155

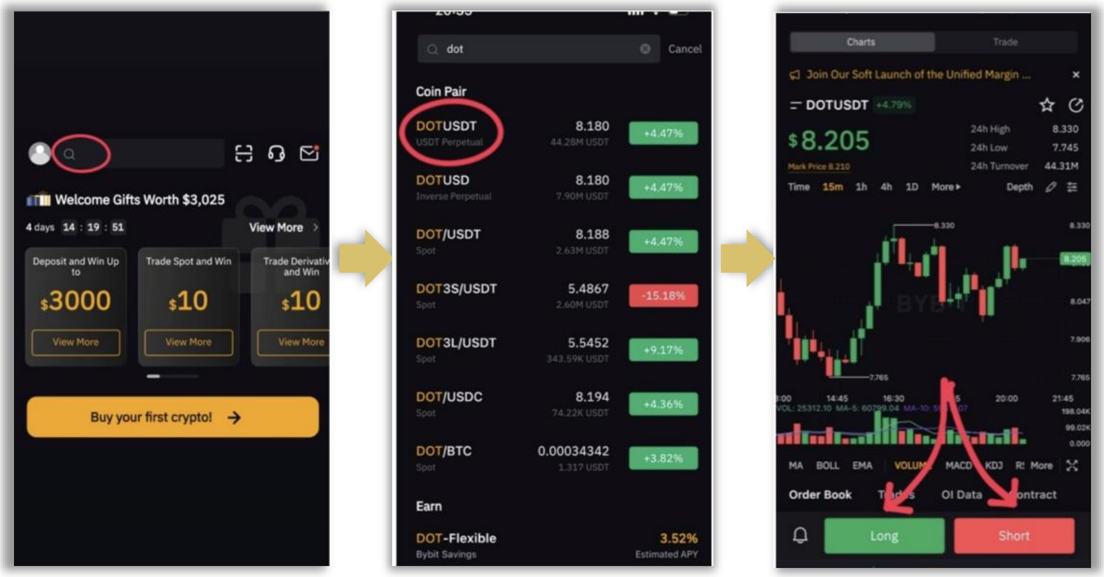
ATTENTION:

- For BUY/LONG Signals we use this sentence: 'Enter above: *value 1* (with a maximum value of *value 2*)
- For SHORT/SELL Signals we use this sentence: 'Enter below: *value 1* (with a minimum value of *value 2*)'
- In the **FREE GROUP** we will use this sentence: 'entry zone: *value 1-value 2*'.

It means the same, it's just a different format for the Auto-Trading Bot (Cornix) to read the signals properly.

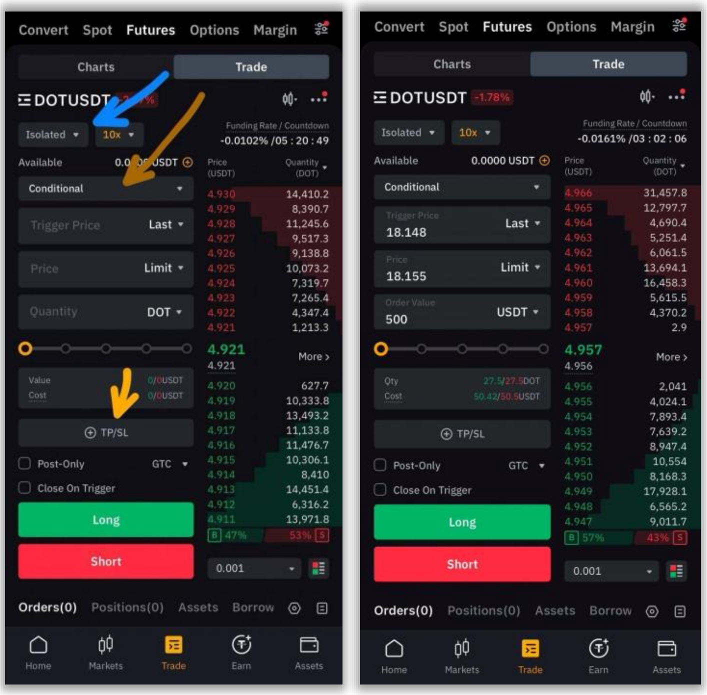
HOW TO FOLLOW OUR SIGNALS MANUALLY IN BYBIT

1. Open your BYBIT App, and search the pair given:
   Select the USDT option, in this case **DOTUSDT**. (USDT PERPETUAL)
2. Once you're in the pair, click the button Long (Buy) If it's a BUY signal or Short (Sell) if it's a SELL signal, depending on what we specify (in this case Buy):

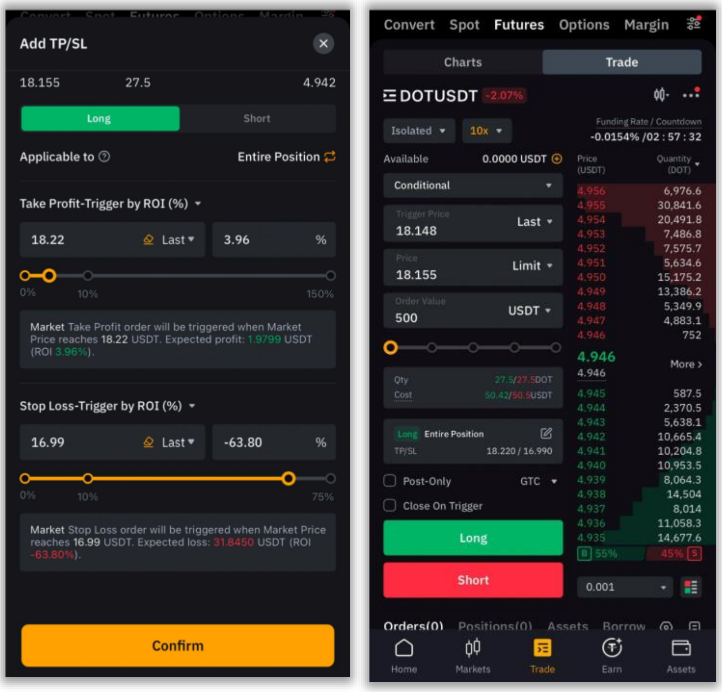


3. The last step. Make sure to use ISOLATED, in the blue arrow you can change the leverage as well. Secondly, make sure to select the 'conditional' mode.
    - In trigger price put the first value (*value 1*) of the interval (18.148).
    - Where it says 'Price' -> Limit put the second value (*value 2*) of the interval (18.155).

Then select the quantity you want to invest (the amount you indicate in *'Quantity' is already multiplied by the leverage used in this case 10x, so if you type 500 with leverage 10x, the real investment is 50*).



The investmed made is indicated where it says 'Cost'. In this example: 50.43 USDT.



This is an example of how to put the TP1 and SL
To use the TP2 and TP3, you have to open 3 different orders only changing the Take Profit value

And then set the TP and SL value indicated in the signal. (In the **RIGHT COLUMN, USE 'LAST' AND LAST**)

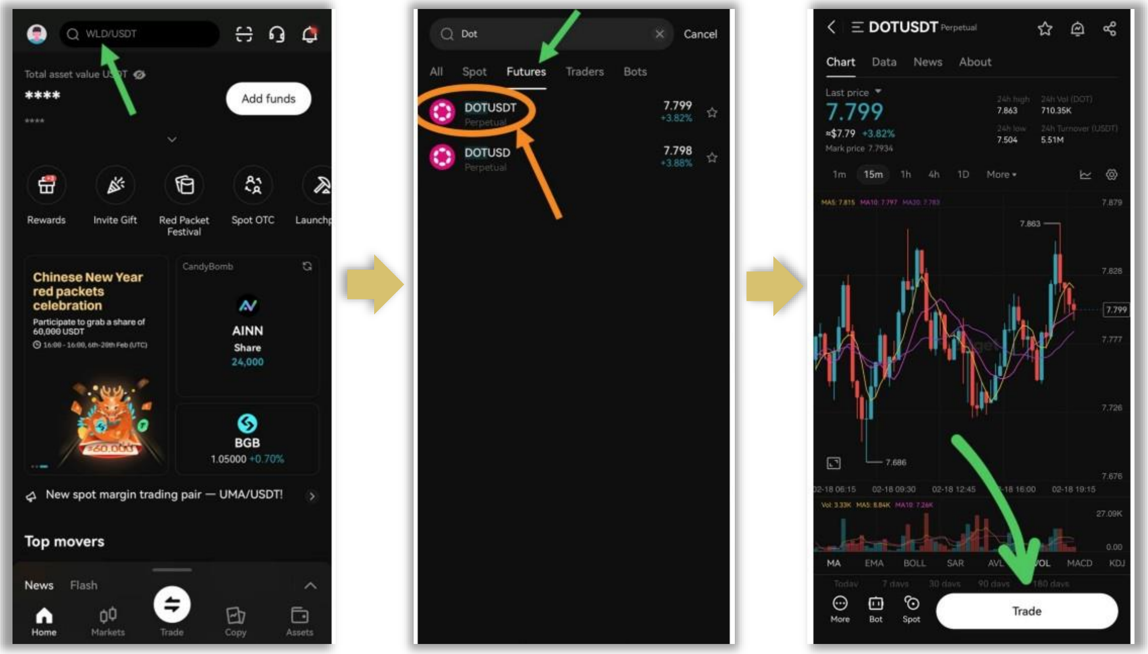
Finally, click the button 'Open Long' if it's a buy signal, or click the 'Open Short' button if it's a SELL signal.

ATTENTION: If it's a SELL signal, you have to do the same. Place a Sell Signal, and place the (*value 1*) and (*value 2*) in the same positions as indicated before.

- If you're going to use more than 1 Take Profit (TP), open a trade for every take profit and maintain the same Stop Loss (SL). Before that, read point 3 of the document where we explain 'How to manage Take-Profits'.

HOW TO FOLLOW OUR SIGNALS MANUALLY IN BITGET

1. Open your BITGET App, and search the pair given:
   Select The USDT option, in this case **<u>DOTUSDT</u>**.

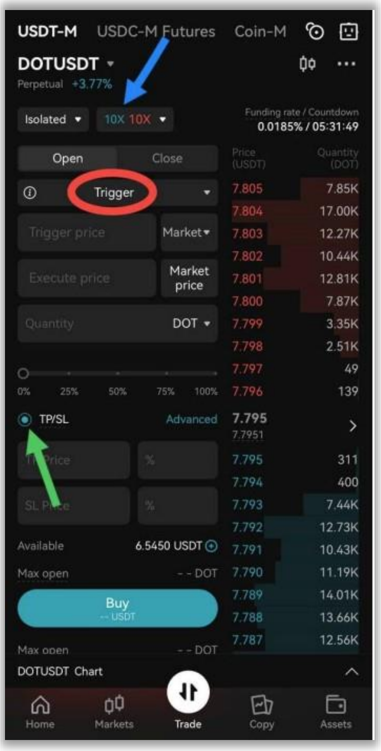


2. The last step. Make sure to use ISOLATED, indicated with the blue arrow. You can change the leverage as well. Secondly, make sure to select the 'Trigger' mode.
   - In **Trigger Price** put the first value (*value 1*) of the interval (18.148).
   - In **Execute Price** put the second value (*value 2*) of the interval (18.155).

Then select the quantity you want to invest. And finally set the TP and SL value indicated in the signal. Finally, click the button 'Buy'.

ATTENTION: if it's a SELL signal, you have to do the same. Place a Sell Signal, and place the (*value 1*) and (*value 2*) in the same positions as indicated before.

- If you're going to use more than 1 Take Profit (TP), open a trade for every take profit and maintain the same Stop Loss (SL). Before that, read <u>point 3</u> of the document where we explain 'How to manage Take-Profits'.
- In the RIGHT COLUMN use 'LAST' and 'LIMIT PRICE'



3. HOW TO MANAGE TAKE-PROFITS

The management of Take Profits depends on the level of risk you want to assume and the amount of money you have invested in your account. There are different strategies:

STRATEGY 1 - RISK LEVEL: LOW (70/20/10)

In the long term it is the most profitable strategy, but it requires time and patience. The strategy is simple.

- First: Choose Amount to invest per Signal. We recommend 10-15% of your funds.
- Open 1 order with the Take-Profit 1 (TP1), with 70% of the amount to invest.
- Open 1 order with the Take-Profit 2 (TP2), with 20% of the amount to invest.
- Open 1 order with the Take-Profit 3 (TP3), with 10% of the amount to invest.

STRATEGY 2 - RISK LEVEL: MEDIUM (50/30/20)

- First: Choose Amount to invest per Signal. We recommend 10-15% of your funds.
- Open 1 order with the Take-Profit 1 (TP1), with 50% of the amount to invest.
- Open 1 order with the Take-Profit 2 (TP2), with 30% of the amount to invest.
- Open 1 order with the Take-Profit 3 (TP3), with 20% of the amount to invest.

STRATEGY 3 - RISK LEVEL: HIGH (30/30/40)

- First: Choose Amount to invest per Signal. We recommend 10-15% of your funds.
- Open 1 order with the Take-Profit 1 (TP1), with 30% of the amount to invest.
- Open 1 order with the Take-Profit 2 (TP2), with 30% of the amount to invest.
- Open 1 order with the Take-Profit 3 (TP3), with 40% of the amount to invest.

4. WHAT IS LEVERAGE?

Imagine you want to buy a 100,000$ house, so you go to the bank to take out a loan. The bank requires you to supply 20% of the value of the property as a down payment on the loan. The result is that, for 20,000$, you can access a property valued in 100,000$. This is an example of leverage in real estate. You have bought the house at a leverage of 5x (20,000 is 1/5 of 100,000).

One year later, the real estate market has appreciated by 10%, so your house is now valued in 110,000$ and you decide to sell it. If you had not asked for a loan and you had paid for the entire house from the beginning (100,000$), your profits of your initial investment would effectively be 10% (10,000$). However, the fact that you only invested 20,000$ and used the leverage, means that those 10,000$ of house appreciation no longer represent only 10% of your investment, but you will have made a much more profitable operation that will have given you a return of 50% (10,000$ profits with an investment of 20,000$, which coincides with the result of multiplying the theoretical profits-10% by your leverage-5x).

Now, let's apply this logic to a crypto trade. Imagine you buy BTC at 30,000$ with TP1 at 30,200$, and leverage is 10x. If you wouldn't have had leverage and it hits TP1, the % profit you take is (30,200/30,000) * 100 = 0.66%. However, with leverage, you multiply that % by 10, so your total profit when it hits TP1 is 6.66% of your initial amount.

If you want to know more about leverage, we recommend that you watch this video: https://www.youtube.com/watch?v=ouswxurqyu0.

5. FINAL RECOMMENDATIONS

- Crypto trading requires a high amount of patience and discipline. You should not assess your results the same day you start. Wait some weeks as you learn how to follow our signals and manage your funds correctly.
- Results are calculated just considering the Take Profit or stop loss level. It means they're indications, not considering a certain take profit strategy. We do it this way because not every customer manages the take profits the same way.
- If your initial inversion is low, don't assume huge risks to get bigger gains faster.
- This is a mid/long-term game, so don't expect to go from 100 do 1000$ in one week. Instead, be disciplined and constant, and remember that your gains will compound little by little.
- Remember that these % we share are indicative and may differ between traders, depending on the trading strategy used and the risk assumed.
- If you have other questions, there's a FAQ (Frequently Asked Questions) section in our website: https://wolfxsignals.com/faq/
- **ENJOY YOUR PROFITS!**
